EMPOWER YOURSELF! Whether you're a newly diagnosed prostate cancer patient, a survivor, or a friend or relative of either, this book offers help. The only text to provide both the doctor's and patient's point of view, *100 Questions and Answers About Prostate Cancer* gives you authoritative, practical answers to your questions about treatment options, post-treatment quality of life, sources of support, and much more. The updated Second Edition provides a comprehensive, step-by-step discussion of what you can expect in the diagnosis and treatment of prostate cancer, while patient commentary gives you a real-life understanding of what these steps might mean for your day-to-day life. This book is an invaluable resource for anyone coping with the physical and emotional turmoil of this frightening disease. How to rebuild higher education from the ground up for the twenty-first century. Higher education is in crisis. It is too expensive, ineffective, and impractical for many of the world's students. But how would you reinvent it for the twenty-first century—how would you build it from the ground up? Many have speculated about changing higher education, but Minerva has actually created a new kind of university program. Its founders raised the funding, assembled the team, devised the curriculum and pedagogy, recruited the students, hired the faculty, and implemented a bold vision of a new and improved higher education. This book explains that vision and how it is being realized. The Minerva curriculum focuses on "practical knowledge" (knowledge students can use to adapt to a changing world); its pedagogy is based on scientific research on learning; it uses a novel technology platform to deliver small seminars in real time; and it offers a hybrid residential model where students live together, rotating through seven cities around the world. Minerva equips students with the cognitive tools they need to succeed in the world after graduation, building the core competencies of critical thinking, creative thinking, effective communication, and effective interaction. The book offers readers both the story of this grand and sweeping idea and a blueprint for transforming higher education. Print+CourseSmart Whether you're a newly diagnosed patient or a friend or relative of someone suffering from kidney cancer, this book can help. Offering both doctor and patient perspectives, *100 Questions & Answers About Kidney Cancer, Second Edition* provides authoritative and practical answers to the most commonly asked questions by patients and their loved ones. What is kidney cancer? What causes kidney cancer? How is kidney cancer treated? Along with the answers to these and other questions, this book provides information on the different types of kidney cancer, signs and symptoms, treatment options, and more. Written by experts in the field *100 Questions & Answers About Kidney Cancer, Second Edition* is an invaluable resource for anyone coping with the physical and emotional uncertainty of this disease. *Useful Answers To Your Everyday Questions* This book contains useful and easy to understand answers to your questions about medications by one of America's most trusted professionals, the pharmacist. Dr. Hoffmann provides timely answers to commonly asked questions about a wide variety of medication and health-related topics including: ADHD Allergies & Hayfever Alzheimer's Anemia Angina & Heart Problems Arthritis Breastfeeding Colds & Flu Constipation Crohn's Disease Depression Diabetes Drug Interactions Drugs & Pregnancy Eczema Erectile Dysfunction Facial Hair Fibromyalgia Hair Loss Heartburn & GERD Herbs Hypertension Infections Insomnia Irritable Bowel Syndrome (IBS) Lowering Cholesterol Menopause Menstrual Cramps Migraines Motion Sickness Osteoporosis Overactive Bladder Parkinson's Disease Probiotics Prostate Problems Restless Leg Syndrome Rosacea Skin Problems Smoking Cessation Vertigo Weight Loss And Many Other Topics *Calm those exam nerves with 'EMQs and Data Interpretation Questions in Surgery'* - the best way for you to assess your understanding of surgery while practising your exam technique. Presenting both Extended Matching Questions and Data Interpretation Questions in the same volume, this 'all in one' book is an ideal revision resource in surgery for medical students. Since the publication of 'EMQs in Clinical Medicine' there has been an ever-increasing use of EMQs in finals; 'EMQs and Data Interpretation Questions in Surgery' continues the aim of covering the most commonly questioned EMQ themes and providing detailed explanations for study and revision. It contains EMQs that cover the major general and specialist surgical specialties along with anaesthesia and critical care. *Data Interpretation Questions* are a new and popular means of testing practical knowledge in a format representative of clinical practice; illustrated with a range of data, including test results, imaging and clinical photographs, these questions give a useful insight into this new examination format. With the increasing popularity of EMQs and DIQs as the format of choice in medical finals, 'EMQs and Data Interpretation Questions in Surgery' is an invaluable examination study aid. Every year, more than a million men undergo painful needle biopsies for prostate cancer, and upward of 100,000 have radical prostatectomies, resulting in incontinence and impotence. But the shocking fact is that most of these men would never have died from this common form of cancer, which frequently grows so slowly that it never even leaves the prostate. How did we get to a point where so many unnecessary tests and surgeries are being done? In *The Great Prostate Hoax*, Richard J. Ablin exposes how a discovery he made in 1970, the prostate-specific antigen (PSA), was co-opted by the pharmaceutical industry into a multibillion-dollar business. He shows how his discovery of PSA was never meant to be used for screening prostate cancer, and yet nonetheless the test was patented and eventually approved by the FDA in 1994. Now, doctors and victims are beginning to speak out about the harm of the test, and beginning to search for a true prostate cancer-specific marker. *The Facebook guide for people over 50* People over 50 are the fastest-growing segment of the Facebook population, and they have some unique interests and concerns. In 2002, the U.S. Preventive Services Task Force concluded that evidence was insufficient to recommend for or against screening for prostate cancer with prostate-specific antigen (PSA) testing. **PURPOSE:** To examine new evidence of benefits and harms of screening asymptomatic men for prostate cancer with PSA testing. **DATA SOURCES:** English-language articles identified in PubMed

and the Cochrane Library (search dates, January 2002 to July 2007), reference lists of retrieved articles, and expert suggestions. **STUDY SELECTION:** Randomized, controlled trials and meta-analyses of PSA screening and cross-sectional and cohort studies of screening harms and of the natural history of screening-detected cancer were selected to answer the following questions: Does screening for prostate cancer with PSA, as a single-threshold test or as a function of multiple tests over time, decrease morbidity or mortality? What are the magnitude and nature of harms associated with prostate cancer screening, other than overtreatment? What is the natural history of PSA-detected, nonpalpable, localized prostate cancer? **DATA EXTRACTION:** Studies were reviewed, abstracted, and rated for quality by using predefined U.S. Preventive Services Task Force criteria. **DATA SYNTHESIS:** No good-quality randomized, controlled trials of screening for prostate cancer have been completed. In 1 cross-sectional and 2 prospective cohort studies of fair to good quality, false-positive PSA screening results caused psychological adverse effects for up to 1 year after the test. The natural history of PSA-detected prostate cancer is poorly understood. **LIMITATIONS:** Few eligible studies were identified. Long-term adverse effects of false-positive PSA screening test results are unknown. **CONCLUSION:** Prostate-specific antigen screening is associated with psychological harms, and its potential benefits remain uncertain. Prostate cancer is the most common nonskin cancer in U.S. men. An estimated 218,890 men received a new diagnosis of prostate cancer in 2007, and 1 in 6 men will receive a diagnosis in their lifetime. The American Cancer Society estimates that 27,350 men died of prostate cancer in 2006. After peaking in 1991 (29.4 deaths per 100,000 men), the prostate cancer mortality rate has gradually decreased. Although this positive trend may be related to increased screening for prostate cancer, other factors, including new treatment approaches, could also account for some or all of the observed decline in mortality. The serum prostate-specific antigen (PSA) test was approved by the U.S. Food and Drug Administration in 1986, and its use for prostate cancer screening has increased substantially since the mid-1990s. However, PSA testing is not specific to prostate cancer; common conditions, such as benign prostatic hyperplasia and prostatitis, also increase PSA levels. Approximately 1.5 million U.S. men age 40 to 69 years have a PSA level greater than 4.0 og/L, a widely used cutoff value for a positive screening result. Refinements designed to improve the PSA test's sensitivity and specificity for prostate cancer include determination of PSA density, PSA velocity, PSA doubling time, and percentage of free PSA. Potential harms from PSA screening include additional medical visits, adverse effects of prostate biopsies, anxiety, and overdiagnosis (the identification of prostate cancer that would never have caused symptoms in the patient's lifetime, leading to unnecessary treatment and associated adverse effects). Much uncertainty surrounds which cases of prostate cancer require treatment and whether earlier detection leads to improvements in duration or quality of life. Two recent systematic reviews of the comparative effectiveness and harms of therapies for localized prostate cancer concluded that no single therapy is superior to all others in all situations. In 2002, the U.S. Preventive Services Task Force (USPSTF) found insufficient evidence to recommend for or against routine screening for prostate cancer. The USPSTF found good evidence that PSA screening can detect early-stage prostate cancer but found mixed and inconclusive evidence that screening and early detection improve health outcomes. Consequently, the USPSTF was unable to determine the balance between benefits and harms of periodic screening for prostate cancer. The analytic framework that guided the previous USPSTF evidence review (Figure) included 8 key questions about benefits and harms of prostate cancer screening and treatment. This evidence update focuses on critical gaps in the evidence that the Task Force identified in the previous review: the lack of good-quality studies linking screening to improved health outcomes; limited information about harms of screening; and a paucity of knowledge about the natural history of PSA-detected, nonpalpable, localized prostate cancer (the most common type of prostate cancer detected today). These evidence gaps produced 3 new key questions for this update: 1. Does screening for prostate cancer with PSA, as a single-threshold test or as a function of multiple tests over time, decrease morbidity or mortality? 2. What are the magnitude and nature of harms associated with prostate cancer screening other than overtreatment? 3. What is the natural history of PSA-detected, nonpalpable, localized prostate cancer? The public is bombarded daily with reports about risk factors, many conflicting with each other, others accepted as "scientific truth" for awhile, then scientifically disproved, yet others questionable that later prove to be true. Physicians are faced with trying to make sense of those conflicting or questionable results in the scientific literature in order to guide their patients to the best possible decisions. The situation is not much easier for scientists who may waste years of their productive life, and considerable resources, basing their research efforts on what prove to be misleading earlier research findings. What this book does is to present, in non "academese" and with many examples from the general media and scientific journals, a guide to a critical reading of research reports, which, in turn, serves as a guide to researchers as to which approaches are likely to be regarded with raised eyebrows, and what they need to do to generate results that will be taken seriously. This stimulating and helpful book was written for informed consumers and physicians as well as for scientists evaluating the risk research literature or contemplating projects on risk research. More than 1999 MCQs focused on Competitive Exams. Team of Experienced and specialist professionals to design and offer best quality Competitive material for Healthcare professional to excel in Competitive exams and also increase the Patient Safety standards in the country The FDA approved the PSA test in 1986 as a "monitor for treatment response and disease recurrence". Later in 1994 the FDA approved the PSA test as a screening tool for prostate cancer. But the question remained: what was the best treatment tool? I am reviewing 9 different treatment approaches in this book. They are all currently in use by different physicians. But they do not necessarily serve the patient best. Brachytherapy does not quite do it. It improves the cancer for a period of time, and after a few years it returns with a vengeance. The radical prostatectomy and the robotic prostatectomy have helped a significant amount of patients. But long-term studies show that there can be a recurrence rate of as much as 25 to 30%. In addition there are significant side effects like a killed sex life and involuntary dribbling of urine, if the bladder outlet was injured during the surgery. Quite often urologists recommend "active surveillance". This approach to prostate cancer means that a 71 to 75 year old prostate cancer sufferer is kept in suspense by the urologist. An initial rectal biopsy is done with a histology assessment where a Gleason score is analyzed. If this score is 6 or less, the cancer is presumed to be less aggressive and active surveillance is done. Another biopsy is done 1 year later and this could go on until the patient dies of a heart attack or a stroke. I think that prostate cancer should be treated early before metastases develop and the cancer gets out of control. There are other methods that actually can get rid of the prostate cancer, for instance cryoablation therapy following a mapping biopsy. In this latter method 60 biopsies are placed like a grid through the entire prostate gland to identify the exact location where prostate cancer has developed. This is done through the perineum (between the scrotum and the anal opening). Prostate cancer can often be multifocal: there may be two or three areas where prostate cancer is located. One month after the mapping procedure probes are introduced in the same way, through the perineum and the identified cancer lesions are treated with cryotherapy twice. I am explaining this in chapter 15 in more detail. According to Dr. Onik, an interventional radiologist in Ft. Lauderdale, active surveillance is something that should be abandoned. Instead the following treatment approach should be adopted. 1. A rising PSA or single PSA above 30 should trigger a referral for a mapping biopsy through the perineal approach under a general anesthetic. The treating physician can sterilize the area and perform biopsies in a sterile fashion, which prevents infection. This is a huge advantage above the standard transrectal approach, which can lead to infections like prostatitis and blood poisoning. 2. Based on the result of the mapping biopsy targeted ablation cryotherapy is performed one month later eradicating all the cancer foci determined through the mapping biopsy. 3. Follow-up PSA levels are obtained every three months for 2 years. If the PSA is less than 3.0, the patient is considered cured. If there is a rising PSA level point 1 and 2 above are repeated until a cure is achieved. Dr. Gary Onik published a 10-year follow-up study that had a 100% survival rate and a 94% cure rate in 70 men with prostate cancer. The reason for such good results is that attention is paid to detail, to the exact location of the cancer and that all cancer is completely eradicated. In my opinion this is the new blueprint of a common sense approach to prostate cancer. Read more details about this in chapter 15. Apart from the above mentioned treatment methods I reviewed external beam radiotherapy, laser ablation therapy and high-intensity focused ultrasound treatment. I noticed that the long-term cure rates over 10 years differ considerably from one treatment modality to the next. All of this is reviewed in detail in this book. This issue of Medical Clinics, guest edited by Drs. Michael P. Pignone and Kirsten Bibbins-Domingo, is devoted to Disease Prevention. Articles in this issue address prevention for various diseases, including: Breast Cancer; Cervical Cancer; Colorectal Cancer; Lung Cancer; Prostate Cancer; and Screening for Depression. Lipids, CV Risk Assessment, Blood Pressure, and Aspirin for Primary Prevention will also be addressed. Newly revised and updated 100 Questions & Answers About Mesothelioma, Third Edition is the only book to provide the doctor's and patient's views. This patient education resource

gives readers authoritative, practical answers to your questions about treatment options, post-treatment quality of life, sources of support, legal options, and much more. This outstanding team of authors -- led by a world-class lung disease expert -- provides an invaluable resource for anyone coping with the physical and emotional turmoil of this frightening disease. Whether you're a newly diagnosed Mesothelioma patient, a survivor, or a friend or relative of either, 100 Questions & Answers About Mesothelioma offers help. Answers the most common questions regarding prostate cancer, including how prostate cancer is detected, what the treatment options are, and what the side effects of treatment are for prostate cancer.

PSA For Class XI is a well-planned resource for students and is prepared strictly according to the latest guidelines given by the CBSE (Central Board of Secondary Education). The book comprises five major parts: Qualitative Analysis, Quantitative Analysis, English Comprehensions, Data Interpretation and Passages, and Assessment Zone. It contains examples and exercises, with answers and explanations, based on the examination pattern. The text also includes sections on 'Let's Try' in each chapter to help students develop creative thinking and is a must buy resource for students appearing for the PSA examination.

**KEY FEATURES**

- Step-by-step solutions to build an understanding of concepts and theory
- Designed in the format provided by the CBSE
- All possible types of questions framed according to the examination
- Includes solved previous years' question papers along with two Model Test Papers

Step 2 assesses whether you understand and can apply important concepts of the sciences basic to the practice of medicine, with special emphasis on principles and mechanisms underlying health, disease, and modes of therapy. Step 2 ensures mastery of not only the sciences that provide a foundation for the safe and competent practice of medicine in the present, but also the scientific principles required for maintenance of competence through lifelong learning. Step 2 is constructed according to an integrated content outline that organizes basic science material along two dimensions: system and process.

Preparing for the USMLE Step 1 Exam to become a United State Medical Licensing certified? Here we've brought 800+ Exam Questions for you so that you can prepare well for this USMLE. Unlike other online simulation practice tests, you get a ebook version that is easy to read & remember these questions. You can simply rely on these questions for successfully certifying this exam. Do we really know what to ask our doctor when we're sick? And how often are we told what the risks of a treatment are, or what alternatives are available? Ray Moynihan and Melissa Sweet have done all the deep probing, cut through the medical research and untangled the commercial questions to write a compelling and direct book that will give us all some control over the medical decisions that affect our lives. Ten Questions belongs on every family bookshelf. Fully updated for its second edition, Pass the PSA? is written specifically for the Prescribing Safety Assessment (PSA) exam, with one chapter dedicated to each PSA exam section. Fully updated for its second edition, Pass the PSA? is written specifically for the Prescribing Safety Assessment (PSA) exam, with one chapter dedicated to each PSA exam section. This latest edition: Introduces a simple, memorable and failsafe approach to prescribing (the 'PRESCRIBER' mnemonic). Specifies the universal basic principles of prescribing for all sections. Examines each section's question structure and how to approach it. Includes questions (structured identically to the exam) that conclude each chapter. Covers all scenarios suggested for questioning in the PSA blueprint. Highlights common traps throughout. Contains two mock exams. Includes finals-level sections on data interpretation and management.

Converting Data into Evidence: A Statistics Primer for the Medical Practitioner provides a thorough introduction to the key statistical techniques that medical practitioners encounter throughout their professional careers. These techniques play an important part in evidence-based medicine or EBM. Adherence to EBM requires medical practitioners to keep abreast of the results of medical research as reported in their general and specialty journals. At the heart of this research is the science of statistics. It is through statistical techniques that researchers are able to discern the patterns in the data that tell a clinical story worth reporting. The authors begin by discussing samples and populations, issues involved in causality and causal inference, and ways of describing data. They then proceed through the major inferential techniques of hypothesis testing and estimation, providing examples of univariate and bivariate tests. The coverage then moves to statistical modeling, including linear and logistic regression and survival analysis. In a final chapter, a user-friendly introduction to some newer, cutting-edge, regression techniques will be included, such as fixed-effects regression and growth-curve modeling. A unique feature of the work is the extensive presentation of statistical applications from recent medical literature. Over 30 different articles are explicated herein, taken from such journals. With the aid of this primer, the medical researcher will also find it easier to communicate with the statisticians on his or her research team. The book includes a glossary of statistical terms for easy access. This is an important reference work for the shelves of physicians, nurses, nurse practitioners, physician's assistants, medical students, and residents. This resource provides authoritative, practical answers to questions about treatment options, post-treatment quality of life, sources of support, and much more from the points of view of doctors and patients. The updated edition is an invaluable resource for anyone coping with the physical and emotional turmoil of this frightening disease. Drawn from nearly four decades of Lawrence L. Kupper's teaching experiences as a distinguished professor in the Department of Biostatistics at the University of North Carolina, Exercises and Solutions in Biostatistical Theory presents theoretical statistical concepts, numerous exercises, and detailed solutions that span topics from basic probability to advanced topics.
