This self-instructional manual on the interpretation and use of epidemiologic data deals with the basic concepts and skills needed for the appraisal of published reports or one's own findings. Applications in clinical medicine, public health, community medicine, and research are all taken into consideration. Making Sense of Data is designed as a workbook of short exercises and instructional self-tests that introduce fundamental approaches and procedures in data interpretation and develop competency in working with epidemiologic tools. Basic concepts are presented in the first section, which also demonstrates the step-by-step assessment of data. The next section discusses rates and other simple measures, and the third shows how to judge their accuracy. Section IV and V deal with more complex issues of associations between variables and the appraisal of cause-effect relationships. Section VI deals with meta-analysis (the critical review and integration of the findings from separate studies) and section VII with the questions to be asked before deciding to apply study results in practice. Numerous changes have been made in this edition, including the addition of a section on the practical application of epidemiological findings, discussions of new topics (Cox proportional hazards regression, qualitative studies, ROC curves), and fresh examples. The Domestic Animal Diversity Information System, DAD-IS, provides information and tools for management, teaching and research related to the characterization, sustainable use and conservation of farm animal genetic resources. The most clinically relevant respiratory care equipment textbook on the market, Mosby's

This programmer's manual is to be used in conjunction with an *Analysts' Manual for the C3 EVAL model*. This manual describes the C3 EVAL command, control and communications model and its preprocessor and post processor. The preprocessor consists of 37 subroutines of approximately 2,378 lines of code. The post processor consists of 18 subroutines of approximately 936 lines of code. The C3 EVAL (85) model has 70 subroutines and approximately 6,314 lines of code. The source code for the model is written in FORTRAN for a VAX 11/785. Each of the program structures (preproc, C3 EVAL, postproc) are presented in separate sections. There is some duplication of subroutine names in preproc and C3 EVAL. In those cases where the subroutine code is actually used by both programs, it is noted in the preproc description. In each section the data structures, notes on the program and extracts of the comments that are in the code as internal documentation. Computer listings of the codes are in the attachments. The preprocessor utilizes the DEC Forms Management System (FMS) to communicate with the users. The post processor is based on DECGRAPH for continuous and bar graph output. The C3 EVAL requires the normal FORTRAN library routines including user options to use the random number generator. **Keywords:** Command, Control, Communications combat assessment; Methodology; Stimulation; Games; Analysis; Effectiveness; Measures. The author examines logic and methodology of design from the perspective of computer science. Computers provide the context for this examination both by discussion of the design process for hardware and software systems and by consideration of the role of computers in design in general. The central question posed by the author is whether or not we can construct a theory of design. A comprehensive overview of the equipment and
